Document diagnostics

The compiler keeps available Markdown content and valid diagrams visible when one diagram fails. Each failed block shows its source position and full message. Add `--diagnostics-summary` to include an overall error and warning count at the top of the document.

Failed Mermaid diagram

Diagram rendering error

`/home/evgeny-igumnov/blueprint4llm/examples/blueprint-diagnostics.md:11:1 · mermaid · diagram.render`

```
mermaid render failed: Chromium failed to start with its sandbox and the retry with --no-sandbox also failed: command failed with exit code 1:
Error: Parse error on line 3:
...art TB  Client -->
----------------------^
Expecting 'AMP', 'COLON', 'PIPE', 'TESTSTR', 'DOWN', 'DEFAULT', 'NUM', 'COMMA', 'NODE_STRING', 'BRKT', 'MINUS', 'MULT', 'UNICODE_TEXT', got 'EOF'

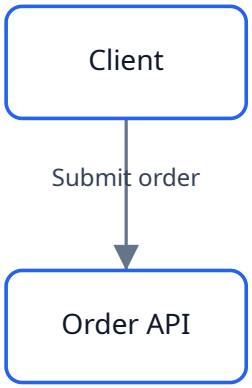
The service continues after the first failure.

Valid draw.io diagram



This diagram and the surrounding text remain available.

Failed Wiremark screen

Diagram rendering error

`/home/evgeny-igumnov/blueprint4llm/examples/blueprint-diagnostics.md:51:1 · wiremark · diagram.render`

`wiremark render failed: unknown component "UnknownControl"`

The final paragraph remains available after both errors. Run `blueprint4llm` with `--check` to collect both diagnostics, or use `--report-json=diagnostics.json` to save their coordinates.
