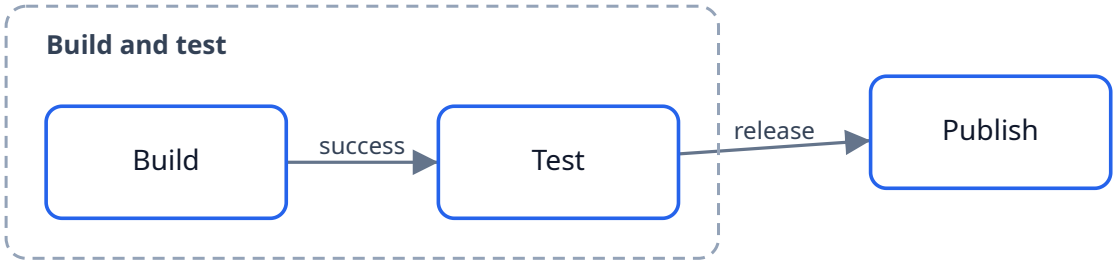
draw.io JSON diagram

Export a diagram with **File** → **Export as** → **JSON** and paste its contents into a `drawio` block. For multiple pages, use `page=<id>`. The `direction=LR` option sets a left-to-right layout; the default is `TB`.



The compiler preserves labels and connections, then creates a new inline SVG diagram with an automatic layout. Original geometry and styles from draw.io JSON are not preserved.
